

Prescriptive Residential Wood Deck Construction Guide

Based on the *2006 International Residential Code*

Where applicable, provisions and details contained in this document are based on the requirements of International Residential Code (IRC). Prescriptive construction methods recommended meet or exceed minimum requirements of the IRC. Provisions that are not found in the IRC are recommended as good industry practice. Where differences exist between provisions of this document and the IRC, provisions of the IRC shall apply. This document is not intended to preclude the use of other construction methods or materials. It is intended that this document be used in conjunction with competent design, accurate fabrication, and adequate supervision of construction. All construction and materials must be approved by the Building official.

Design by American Forest & Paper Association, Inc

MINIMUM REQUIREMENTS

1. This document applies to single level residential wood decks only.
2. All lumber shall be identified by the grade mark of, or certificate of inspection issued by, an approved lumber grading or inspection bureau or agency (www.alsc.org). All lumber shall be a naturally durable species (such as Redwood or Western Cedars) or be pressure-treated with an approved process and preservative in accordance with American Wood Protection Association standards. All lumber in contact with the ground shall be approved preservative treated wood suitable for ground contact.
3. All nails shall meet the requirements of *ASTM F 1667*. Wood screws shall meet the requirements of *ANSI/ASME B18.6.1*. Bolts and lag screws shall meet the requirements of *ANSI/ASME B18.2.1*.
4. To resist corrosion, the following is required:
 - All screws, bolts, and nails for use with preservative treated wood shall be hot-dipped galvanized, stainless steel, silicon bronze or copper.
 - Fasteners other than nails and timber rivets shall be permitted to be of mechanically deposited zinc-coated steel with coating weights in accordance with *ASTM B 695*.
 - All hardware (joist hangers, cast-in-place post anchors, etc.) shall be galvanized or shall be stainless steel.
 - Fasteners and connectors exposed to, and located within 300 feet of, a salt water shoreline, shall be stainless steel grade 304 or 316.
 - Other coated or non-ferrous fasteners or hardware shall be as approved by the authority having jurisdiction.
5. Decks supporting hot tubs are beyond the scope of this document.
6. This document does not apply to decks which will experience snow loads, snow drift loads, or sliding snow loads that exceed 40 psf. This document does not address lateral loads on decks such as wind or seismic.
7. Flashing shall be corrosion-resistant metal of minimum nominal 0.019-inch thickness or approved non-metallic material.
8. Decks shall not be used or occupied until final inspection and approval is obtained.
9. This document is not intended to preclude the use of other construction methods or materials not shown herein.

DECKING REQUIREMENTS

All decking material shall be composed of dimension lumber (2" nominal thickness) or span rated decking in accordance with the American Lumber Standard Committee *Policy for Evaluation of Recommended Spans for Span Rated Decking Products*. Attach decking to each joist with 2-8d threaded nails or 2-#8 screws. Space decking boards approximately 1/8" apart. See Figure 11 for decking connection requirements at the rim joist. Decking may be placed from an angle perpendicular to the joists to an angle of 45 degrees to the joists. Each segment of decking must bear on a minimum of 4 joists. Decking not meeting the above requirements may be substituted when the product has been approved by the Building Official.

JOIST SIZE

The span of a joist is measured from the centerline of bearing at one end of the joist to the centerline of bearing at the other end of the joist and does not include the length of the overhangs. Use Table 2 to determine joist span based on lumber size and joist spacing. See Figure 1 and Figure 2 for joist span types.

Table 2. Maximum Joist Spans

Species	Size	Joist Spacing (o.c.)		
		12"	16"	24"
Southern Pine	2x8	10' - 6"	10' - 6"	10' - 2"
	2x10	15' - 2"	15' - 2"	13' - 1"
	2x12	18' - 0"	18' - 0"	15' - 5"
Douglas Fir- Larch, Hem- Fir, SPF ²	2x8	9' - 3"	9' - 3"	9' - 1"
	2x10	13' - 4"	13' - 4"	11' - 1"
	2x12	17' - 10"	15' - 9"	12' - 10"
Redwood, Western Cedars, Ponderosa Pine ³ , Red Pine ³	2x8	8' - 4"	8' - 4"	8' - 4"
	2x10	12' - 0"	12' - 0"	10' - 7"
	2x12	16' - 1"	15' - 1"	12' - 3"

1. Assumes 40 psf live load, 10 psf dead load, L/180 cantilever deflection with 230 lb point load, No. 2 grade, and wet service conditions. See span calculator at www.awc.org for simple span conditions without cantilevers.

2. Incising assumed for refractory species including Douglas fir-larch, hem-fir, and spruce-pine-fir.

3. Design values based on northern species with no incising assumed.

Figure 1A: Joist Span – Deck Attached at House and Bearing Over Beam

Figure 1B: Joist Span – Joists Attached at House and to Side of Beam

Figure 2: Joist Span – Free Standing Deck

BEAM SIZE & ASSEMBLY REQUIREMENTS

Deck beam spans shall be in accordance with Table 3 and can extend past the post centerline up to $L_B/4$ as shown in Figure 3. Joists may bear on the beam and extend past the beam centerline up to $L_J/4$ as shown in Figures 1A and 2, or the joists may attach to the side of the beam with joist hangers as shown in Figure 1B (however, joists shall not be attached to opposite sides of the same beam). See JOIST-TO-BEAM CONNECTION details, Figure 6. Where multiple 2x members are used, the deck's beam is assembled by attaching the members identified in Table 3 in accordance with Figure 4.

Figure 3: Beam Span Types

3-2x12	13' - 11"	12' - 1"	10' - 9"	9' - 10"	9' - 1"	8' - 6"	8' - 1"	

1. Assumes 40 psf live load, 10 psf dead load, L/360 simple span beam deflection limit, L/180 cantilever deflection limit, No. 2 grade, and wet service conditions.
2. Incising assumed for refractory species including Douglas fir-larch, hem-fir, and spruce-pine-fir.
3. Design values based on northern species with no incising assumed.

Figure 4: Beam Assembly Details

DECK FRAMING PLAN

A framing plan shows the joist and beam layout; the location of the ledger board, posts, and footings, and the type, size, and spacing of the ledger board fasteners. See Figure 5 for an example of a typical deck framing plan.

Figure 5: Typical Deck Framing Plan

JOIST-TO-BEAM CONNECTION

Each joist shall be attached to the beam as shown in Figure 6. Joists may bear on and overhang past the beam a maximum of $LJ/4$. Use Option 1 or Option 2 to attach the joist to the beam. Option 1 shall only be used if the deck is attached to the house with a ledger (see LEDGER ATTACHMENT REQUIREMENTS) or as shown in Figure 23. Mechanical fasteners or hurricane clips used as shown in Option 2 must have a minimum capacity of 100 lbs in both uplift and lateral load directions. Joists may also attach to the side of the beam with joist hangers per Option 3 (however, joists shall not be attached to opposite sides of the same beam). See JOIST HANGERS for more information. Hangers, clips, and mechanical fasteners shall be galvanized (see MINIMUM REQUIREMENTS).

Figure 6: Joist-to-Beam Detail

JOIST HANGERS

Joist hangers, as shown in Figure 7, shall each have a minimum download capacity in accordance with Table 3A. The joist hanger shall be selected from an approved manufacturer's product data based on the dimensions of the joist or header it is carrying. Joist hangers shall be galvanized (see MINIMUM REQUIREMENTS). Use joist hangers with inside flanges when clearances to the edge of the beam or ledger board dictate.

Do not use clip angles or brackets to support joists.

Table 3A: Joist Hanger Download Capacity

Joist Size	Minimum Capacity, lbs
2x8	600
2x10	700
2x12	800

Figure 7: Typical Joist Hangers

POST REQUIREMENTS

All deck post sizes shall be 6x6 (nominal) or larger, and the maximum height shall be 14'-0" measured to the underside of the beam. Posts shall be centered on footings. Cut ends of posts shall be field treated with an approved preservative (such as copper naphthenate) The beam shall be attached to the post by notching the 6x6 as shown in Figure 8 or by providing an approved post cap to connect the beam and post as shown in Figure 10. All 3-ply beams shall be connected to the post by a post cap. All thru-bolts shall have washers at the bolt head and nut. Attachment of the beam to the side of the post without notching is prohibited (see Figure 9).

Figure 8: Post-to-Beam Attachment Requirements

Figure 9: Prohibited Post-to-Beam Attachment Condition

Figure 10: Alternate Approved Post-to-Beam Post Cap Attachment

RIM JOIST REQUIREMENTS

Attach a continuous rim joist to the ends of joists as shown in Figure 11. Attach decking to the rim joist as shown in Figure 11. For more decking attachment requirements, see DECKING REQUIREMENTS.

Figure 11: Rim Joist Connection Details

FOOTINGS

See Figure 12 and Table 4 for footing size, footing thickness, and post attachment options and requirements. All footings shall bear on solid ground and shall be placed at least 12" below the undisturbed ground surface; bearing conditions shall be based on an approved Soils Report, or shall be verified in the field by the building official prior to placement of concrete. Where the building official determines that in-place soils with an allowable bearing capacity of less than 1,500 psf are likely to be present at the site, the allowable bearing capacity shall be determined by a soils investigation.

DECK FOOTINGS CLOSER THAN 5'-0" TO AN EXISTING EXTERIOR HOUSE WALL MUST BEAR AT THE SAME ELEVATION AS THE FOOTING OF THE EXISTING HOUSE FOUNDATION.

Do not construct footings over utility lines or enclosed meters. Call the local utilities before digging.

Pre-manufactured post anchors shall be galvanized. See MINIMUM REQUIREMENTS.

Table 4: Footing Sizes

Beam Span, L _B	Joist Span, L _J	Round ¹ Footing Diameter	Footing Thickness ³
6'	<10'	15"	6"
	<14'	17"	6"
	<18'	20"	7"
8'	<10'	17"	6"
	<14'	20"	8"
	<18'	23"	9"
10'	<10'	19"	7"
	<14'	22"	9"

	<14'	28"	12"
	<18'	32"	13"
18'	<10'	25"	10"
	<14'	30"	12"
	<18'	34"	14"

1. Square footings are permitted to have widths 2" less than the given diameter of round footings.

2. Assumes 1,500 psf soil bearing capacity.

3. Assumes 2,500 psi compressive strength of concrete.

Coordinate footing thickness with post base and anchor requirements.

Figure 12: Typical Footing Options

LEDGER ATTACHMENT REQUIREMENTS

GENERAL: Attach the ledger board, which shall be equal to or greater than the deck joist depth, but less than or equal to the rim joist depth, to the existing exterior wall in accordance with Figure 14 through Figure 16. When attachments are made to the existing house band joist, the band joist shall be capable of supporting the new deck. If this cannot be verified or conditions at the existing house differ from the details herein, then either a free-standing deck or full plan submission is required. **See FREE-STANDING DECKS.**

SIDING AND FLASHING: House siding, or the exterior finish system, must be removed prior to installation of the ledger board. Approved corrosion resistant flashing is required at any ledger board connection to a wall of wood framed construction (see MINIMUM REQUIREMENTS). See Figure 14 for continuous flashing with drip edge. The threshold shall be carefully flashed and caulked to prevent water intrusion due to splash from the deck or melting snow and ice.

MANUFACTURED WOOD I-JOIST: The term “I-Joist” denotes manufactured wood “I” joists (see Figure 13A). Many new homes constructed with wood I-joists include 1” or thicker engineered wood products (EWP) – such as oriented strand board (OSB) or structural composite lumber (SCL) including laminated veneer lumber (LVL) – as band joists (or rim boards) that can support the attachment of a deck (see Figure 14). However, some older homes might be constructed with band boards that are too thin (less than 1”) to support a deck. In such cases, a free-standing deck or a full plan submission is required.

Figure 13A: Wood I-Joist Profile

Figure 14: General Attachment of Ledger Board to Band Joist or Rim Board

Figure 15: Attachment of Ledger Board to Foundation Wall (Concrete or Solid Masonry)

Figure 16: Attachment of Ledger Board to Foundation Wall (Hollow Masonry)

PROHIBITED LEDGER ATTACHMENTS

Attachments to exterior veneers (brick, masonry, stone) and to cantilevered floor overhangs or bay windows are prohibited (see Figures 17 and 18). In such cases the deck shall be free-standing. (See **FREE-STANDING DECKS**)

Figure 18: No Attachment to House Overhang

Figure 17: No Attachment to or Through Exterior Veneers (Brick, Masonry, Stone)

LEDGER BOARD FASTENERS

Deck-ledger connection to band joist or rim board

The connection between a deck ledger and a 2" nominal lumber band joist (1-1/2" actual) or EWP rim board bearing on a sill plate or wall plate shall be constructed with 1/2" lag screws or bolts with washers per Table 5 and Figure 19 (**see MINIMUM REQUIREMENTS**). Only those fasteners noted below are permitted. LEAD ANCHORS ARE PROHIBITED

Table 5. Fastener Spacing for a Southern Pine, Douglas Fir-Larch, or Hem-Fir Deck Ledger and a 2-inch Nominal Solid-Sawn Spruce-Pine-Fir^{7,9} Band Joist or EWP Rim Board⁶
(Deck Live Load = 40 psf, Deck Dead Load = 10 psf)^{3,6}

Joist Span	Rim Board or Band Joist	6'-0" and less	6'-1" to 8'-0"	8'-1" to 10'-0"	10'-1" to 12'-0"	12'-1" to 14'-0"	14'-1" to 16'-0"	16'-1" to 18'-0"
Connection Details	On-Center Spacing of Fasteners^{4,5}							
1/2" diameter lag screw with 15/32" maximum sheathing¹	1" EWP ⁶	24"	18"	14"	12"	10"	9"	8"
	1-1/8" EWP ⁶	28"	21"	16"	14"	12"	10"	9"
	1-1/2" Lumber ^{7,9}	30"	23"	18"	15"	13"	11"	10"
1/2" diameter bolt with 15/32" maximum sheathing	1" EWP ⁶	24"	18"	14"	12"	10"	9"	8"
	1-1/8" EWP ⁶	28"	21"	16"	14"	12"	10"	9"
	1-1/2" Lumber ^{7,9}	36"	36"	34"	29"	24"	21"	19"
1/2" diameter bolt with 15/32" maximum sheathing and 1/2" stacked washers^{2,8}	1" EWP ⁶	24"	18"	14"	12"	10"	9"	8"
	1-1/8" EWP ⁶	28"	21"	16"	14"	12"	10"	9"
	1-1/2" Lumber ^{7,9}	36"	36"	29"	24"	21"	18"	16"

- 1. The tip of the lag screw shall fully extend beyond the inside face of the band joist.***
- 2. The maximum gap between the face of the ledger board and face of the wall sheathing shall be 1/2".***
- 3. Ledgers shall be flashed or caulked to prevent water from contacting the house band joist (see Figures 14, 15, and 16).***
- 4. Lag screws and bolts shall be staggered per Figure 19.***
- 5. Deck ledgers shall be minimum 2x8 pressure-preservative-treated No.2 grade lumber, or other approved materials as established by standard engineering practice.***
- 6. When solid-sawn pressure-preservative-treated deck ledgers are attached to engineered wood products (minimum 1" thick wood structural panel band joist or structural composite lumber including laminated veneer lumber), the ledger attachment shall be designed in accordance with accepted engineering practice. Tabulated values based on 300 lbs and 350 lbs for 1" and 1-1/8" EWP rim board, respectively.***
- 7. A minimum 1"x9 1/2" Douglas fir-larch laminated veneer lumber rim board shall be permitted in lieu of the 2" nominal band joist.***
- 8. Wood structural panel sheathing, gypsum board sheathing, or foam sheathing not exceeding one inch thickness shall be permitted. The maximum distance between the face of the ledger board and the face of the band joist shall be one inch.***
- 9. Fastener spacing also applies to southern pine, Douglas fir-larch, and hem-fir band joists.***

Placement of lag screws or bolts in deck ledgers

The lag screws or bolts shall be placed 2" from the bottom or top of the deck ledgers and between 2" and 5" from the ends. The lag screws or bolts shall be staggered from the top to the bottom along the horizontal run of the deck ledger (see Figure 19). Proper installation of lag screws or bolts shall be verified by the building official.

Figure 19: Ledger Board Fastener Spacing and Clearances

Thru-Bolts

Thru-bolts shall have a diameter of 1/2". Pilot holes for thru-bolts shall be 17/32" to 9/16" in diameter. Thru-bolts require washers at the bolt head and nut.

Expansion and Adhesive Anchors

Use approved expansion or adhesive anchors when attaching a ledger board to a concrete or solid masonry wall as shown in Figure 15 or a hollow masonry wall with a grouted cell as shown in Figure 16. Expansion and adhesive anchor bolts shall have a diameter of 1/2". Minimum embedment length shall be per the manufacturer's recommendations. All anchors must have washers.

Lag Screws

Lag screws shall have a diameter of 1/2" (see MINIMUM REQUIREMENTS). Lag screws may be used only when the field conditions conform to those shown in Figure 14. See Figure 20 for lag screw length and shank requirements. All lag screws shall be installed with washers.

Lag screw installation requirements:

Each lag screw shall have pilot holes drilled as follows:

- 1) Drill a 1/2" diameter hole in the ledger board,
- 2) Drill a 5/16" diameter hole into the band board of the existing house.

DO NOT DRILL A 1/2" DIAMETER HOLE INTO THE BAND BOARD.

The threaded portion of the lag screw shall be inserted into the pilot hole by turning.

DO NOT DRIVE LAG SCREWS WITH A HAMMER. Use soap or a woodcompatible lubricant as required facilitating tightening. Each lag screw shall be thoroughly tightened (snug but not over-tightened to avoid wood damage).

Figure 20: Lag Screw Requirements

FREE-STANDING DECKS

Decks which are free-standing do not utilize the exterior wall of the existing house to support vertical loads (see Figure 21); instead, an additional beam with posts is provided at or within L/4 of the existing house. THE ASSOCIATED DECK POST FOOTINGS SHALL BE PLACED AT THE SAME ELEVATION AS THE EXISTING HOUSE FOOTING (see Figure 2 and Figure 12).

For houses with basements, a cylindrical footing (caisson) is recommended to minimize required excavation at the basement wall. Beam size is determined by Table 3.

Figure 21: Free-Standing Deck

DECK STABILITY

Decks greater than 2 feet above grade shall be provided with diagonal bracing.

Diagonal Bracing: Provide diagonal bracing both parallel and perpendicular to the beam at each post as shown in Figure 22. When parallel to the beam, the bracing shall be bolted to the post at one end and beam at the other. When perpendicular to the beam, the bracing shall be bolted to the post at one end and a joist or blocking between joists at the other. When a joist does not align with the bracing location, provide blocking between the next adjacent joists. Decks attached to the house do not require diagonal bracing perpendicular to the house.

Attachment to House: Attach the deck rim joist to the existing house exterior wall as shown in Figure 23 for a free-standing deck or attach the deck ledger to the house as shown in Figures 14, 15, or 16. The wall must be sheathed with minimum 3/8" wood structural panel sheathing. Use lag screws or thru-bolts when fastening to an existing band joist or wall stud; use expansion anchors or epoxy anchors when fastening to concrete or masonry. **DO NOT ATTACH TO BRICK VENEERS. VERIFY THIS CONDITION IN THE FIELD PRIOR TO UTILIZING THIS METHOD.** Fasteners shall be 16" on center and staggered in 2 rows for free-standing decks. Flashing over the rim joist is required and must be installed in accordance with the flashing provisions in the LEDGER ATTACHMENT REQUIREMENTS.

Figure 22: Diagonal Bracing Requirements

Figure 23: Attachment of Free-Standing Deck to House for Deck Stability

GUARD REQUIREMENTS

All decks greater than 30" above grade are required to have a guard - one example is shown in Figure 24. Other methods and materials may be used for guard construction when approved by the Building Official.

Figure 24: Example Guard Detail

GUARD POST ATTACHMENTS

Deck guard posts shall be a minimum 4x4 (nominal) No.2 or higher grade (for species listed in Table 1) with an adjusted bending design value not less than 1,050 psi.

GUARD POST TO OUTSIDE JOIST: Guard posts for guards which run parallel to the deck joists shall be attached to the outside joist per Figure 25.

Figure 25: Guard Post to Outside Joist Example

*guard posts can be installed as shown in Figure 26 (between joists) if blocking is installed as shown above within 12" of each side of the post

GUARD POST TO RIM JOIST:

Guard posts for guards that run perpendicular to the deck joists shall be attached to the rim joist in accordance with Figure 26. As shown in Figure 26, hold-down anchors must be installed to attach the guard post and rim joist to the deck joists. There shall be a minimum of two 1/2" diameter bolts at the hold-down anchors' attachment to the joist. Only hold-down anchor models meeting these minimum requirements shall be used.

Figure 26: Guard Post to Rim Joist Example

STAIR REQUIREMENTS

Stairs, stair stringers, and stair guards shall meet the requirements shown in Figure 27 through Figure 34 and Table 6 except where amended by the local jurisdiction. All stringers shall be a minimum of 2x12. Stair stringers shall not span more than the dimensions shown in Figure 28. If the stringer span exceeds these dimensions, then a 4x4 post may be provided to support the stringer and shorten its span length. The 4x4 post shall be notched and bolted to the stringer with (2) 1/2" diameter throughbolts with washers per Figure 8. The post shall be centered on a 12" diameter or 10" square, 6" thick footing. The footing shall be constructed as shown in Figure 34 and attached to the post as shown in Figure 12. An intermediate landing may also be provided to shorten the stringer span (see provisions below). If the total vertical height of a stairway exceeds 12'-0", then an intermediate landing shall be required. All intermediate stair landings must be designed and constructed as a free-standing deck using the details in this document. Stairs shall be a minimum of 36" in width as shown in Figure 33. If only cut stringers are used, a minimum of three are required. For stairs greater than 36" in width, a combination of cut and solid stringers can be used, but shall be placed at a maximum spacing of 18" on center (see Figure 29). The width of each landing shall not be less than the width of the stairway served. Every landing shall have a minimum dimension of 36" measured in the direction of travel and no less than the width of the stairway served.

Figure 27: Tread and Riser Detail

Figure 28: Stair Stringer Requirements

Figure 29: Tread Connection Requirements

Table 6: Minimum Tread Size for Cut and Solid Stringers

Table 6: Minimum Tread Size for Cut and Solid Stringers ¹		
Species	Cut Stringer	Solid Stringer
Southern Pine	2x4 or 5/4	2x6
Douglas Fir Larch, Hem-Fir, SPF ²	2x4 or 5/4	2x8 or 3x4
Redwood, Western Cedars, Ponderosa Pine ³ , Red Pine ³	2x4 or 5/4	2x10 or 3x4

1. Assumes 300 lb concentrated load, L/288 deflection limit, No. 2 grade and wet service conditions
2. Incising assumed for refractory species including Douglas fir-larch, hem-fir, and spruce-pine-fir.
3. Design values based on northern species with no incising assumed.

STAIR HANDRAIL REQUIREMENTS

All stairs with 4 or more risers shall have a handrail on at least one side (Figure 32A). The handrail height measured vertically from the sloped plane adjoining the tread nosing shall be 34" min. and 38" max. (Figure 30) Handrails shall be graspable and composed of decay-resistant and/or corrosion resistant material; shall be Type I, Type II, or provide equivalent graspability (Figure 32B). Type I shall have a perimeter dimension of 4" min. and 6-1/4" max. Type II rails with a perimeter greater than 6-1/4" shall provide a graspable finger recess area on both sides of the profile. All shapes shall have a smooth surface with no sharp corners. Handrails shall run continuously from a point directly over the lowest riser to a point directly over the highest riser and shall return to the guard at each end (Figure 33). Handrails may be interrupted by guard posts at a turn in the stair.

STAIR FOOTING REQUIREMENTS

Where the stairway meets grade, attach the stringers to the stair guard posts as shown in Figure 34. Posts shall bear on footings. All footings shall bear on solid ground and shall be placed at least 12 inches below the undisturbed ground surface or below the frost line, whichever is deeper (Figure 34). Stringers shall not bear on new or existing concrete pads or patios that are not founded below this depth. When guards are not required (see GUARD REQUIREMENTS), posts may terminate below the bottom tread elevation.

STAIR LIGHTING REQUIREMENTS

Stairways shall have a light source located at the top landing such that all stairs and landings are illuminated. The light switch shall be operated from inside the house. However, motion detected or timed switches are acceptable.

FRAMING AT CHIMNEY OR BAY WINDOW

All members at a chimney or bay window shall be framed in accordance with Figure 35. Headers may span a maximum of 6'-0". When a chimney or bay window is wider than 6'-0", one or more 6x6 posts may be added to reduce header spans to less than 6'-0". In such cases, the post footing must meet the requirements in the FOOTINGS section. Headers with a span length greater than 6'-0" require a plan submission.
